DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, drawn to a method of identifying phenotypes which vary in cell lines as a result of genetic variation, comprising measuring one or more phenotypes in cell lines from one or more pedigrees and testing whether the pattern of the phenotype data conforms to the rules of Mendelian transmission, classified in class 435, subclass 325.
 - II. Claims 10-14, drawn to a method of identifying mRNAs that vary in levels as a result of genetic variation, classified in class 435, subclass 6.
 - III. Claims 15 and 16, drawn to a method of identifying phenotypes which vary in cell lines as a result of genetic variation, comprising determining the genotype of a set of cell lines from unrelated subjects at candidate genes, measuring the phenotype in the cell lines, measuring whether genetic variation among the cell lines correlates with variation in the phenotype, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are different methods with different steps, starting material and goals.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1656

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
